

assist with vegetative flush development.

If the trees lose canopy condition or leaves start to yellow prematurely or flowering is very heavy then it will be necessary to apply additional nitrogen in the form of foliar nitrogen at a rate of 1% (1 kg low biuret urea per 100 litres of water) and magnesium at a rate of 1% (1 kg magnesium sulphate per 100 litres of water) - the two can be mixed for the foliar spray. Spray to runoff and repeat as necessary. *Never mix foliar boron with foliar nitrogen.*

The CalSiMag EcoLime is available from Script New Zealand and they have a depot in Portside Road at Mount Maunganui. The contact person is Phil and his contact details are cell 027-3158333.

The Ravensdown Avocado Mix and magnesium nitrate products are available through Ravensdown.
